**MEMORANDUM FOR COMMANDER, Defense Technical Information Center,  
Cameron Station, Alexandria, VA 22314**

**SUBJECT:** Transmittal of

1. Reference AR 70-31.
2. Two copies of "Endangered Species and North American Waterfowl Management Plan Joint Venture Areas," IWR Report 96-R-22, have hereby been submitted.
3. Initial distribution of this report has been made to appropriate Corps of Engineers agencies. It is recommended that copies of this report be forwarded to the National Technical Information Center.
4. Request for the DTIC Form 50 (Incl 2) be completed and returned to WRSC-IWR.

**FOR THE DIRECTOR:**

Enclosures

Kyle E. Schilling  
Director

## **ACKNOWLEDGMENTS**

I would like to thank Dave Harrelson of the FWS in Arlington, VA, who was a tremendous help. Together, we sorted and photocopied many recovery plans. The entire Endangered Species Office of the FWS was extraordinarily helpful and accommodating. I would also like to thank Mark Koneff of the NAWMP Office of the FWS for providing me with data on Joint Venture Areas and GIS-generated maps. Mark Dunning, Jim Comiskey, and Bill Hansen of IWR also provided valuable comments and suggestions.

## **EXECUTIVE SUMMARY**

In accordance with GPRA (Government Performance and Review Act) and the study of the Operations and Maintenance Program, the Natural Resources Management Branch of the Corps has set out to develop performance measures. The development of two such measures is dependent on the acquisition of further information. Specifically, information is needed regarding the percent of Corps acreage included in Fish and Wildlife Service (FWS) Endangered Species Recovery Plans that meet the recovery plan requirements; and the percent of Corps acreage included within North American Waterfowl Management Joint Venture Implementation Plans where proposed work has been accomplished. This report seeks to provide this information.

In summary, the Corps has recovery responsibilities for 65 listed species with final recovery plans and for 11 listed species with draft recovery plans. Nearly 40% of those species with final recovery plans are found within the South Atlantic Division. There are an estimated 312 Corps projects which are involved in such recovery plans. The Corps has an estimated 7,480,000 acres of land and waters possibly involved in final recovery plans. Over 20% of this area (1,673,000 acres) is found within the Omaha District. Recovery responsibilities of the Corps range from the highly involved (e.g., monitoring populations, developing management strategies; modifying habitat) to ones that are limited in scope (e.g., ensuring that 404 permits do not adversely harm species).

The Corps also has significant land holdings which fall within NAWMP Joint Venture Areas (JVAs). The Corps manages 1,697,000 acres of lands within JVAs. This acreage represents 15.4% of the total land and waters owned or leased by the Corps (11.9 million acres) and 8.8% of lands included in JVAs (19,178,559 acres). Most of this area (40%) is in the Lower Mississippi JVA. There are 66 Corps projects within eight of the JVAs. The Southwestern Division contains the greatest amount of Corps lands included in JVAs (406,300 acres) and the New England Division the least (9,200 acres).

## **CHAPTER 1. INTRODUCTION**

### **Environmental Performance Measures**

More than 460 projects totaling nearly 12 million acres of water and land are administered by the U.S. Army Corps of Engineers (Corps) for a variety of purposes. The natural resource program mission calls for the Corps to “promote awareness of environmental values and adhere to sound environmental stewardship, protection, compliance, and restoration practices”. With an annual budget of \$69 million, the Corps has an active and important role to play in “managing” natural resources.

Underlying all activities undertaken by the Corps, or any federal agency, is the responsibility to perform efficiently. In 1988, performance indicators were first introduced to the Corps of Engineers under the leadership of the Operations, Construction and Readiness Division. This process moved the Corps community forward and filled a management void for monitoring performance. In 1991, a comprehensive study of the Operations and Maintenance Program was performed. This Study indicated a need to develop Corps-wide standards of information management and performance measurement compatibility.

Recently, there have been several Federal Government initiatives directed toward improving government performance. The report of the National Performance Review (Gore 1993) recommends many actions to be taken by specific agencies to reduce costs, improve productivity, and provide better levels of service to the American public. This call for change includes establishing performance goals and related performance measures for the conduct of all “business” within federal agencies. The Government Performance and Results Act (GPRA) initiates internal management reforms within the federal government by requiring that agencies establish program objectives and measure program performance against these objectives. Each federal agency must submit a strategic plan for FY97 to the Director of the Office of

Management and Budget that includes a description of how performance objectives are to be achieved and measured.

In accordance with GPRA and the Study of the Operations and Maintenance Program, the Natural Resources Management Branch of the Corps has set out to develop performance measures. There are currently twelve performance measures for environmental stewardship:

1. Percent of mitigation lands (acres) meeting the requirements in the authorizing legislation or relevant Corps of Engineers decision document.
2. Percentage of Corps acreage included within North American Waterfowl Management Plan (NAWMP) Joint Venture Implementation Plans where work has been accomplished in support of Implementation Plan goals.
3. Percent of Federally listed species with final Fish and Wildlife Service (FWS)/National Marine Fisheries Service (NMFS) Recovery Plan requirements divided by the number of species for which the Corps has recovery requirements specified in final FWS/NMFS Recovery Plans.
4. Percent of fish hatchery capacity designated for mitigation which is achieving the requirements of authorizing legislation or relevant Corps decision document.
5. Percent of Corps project wetland acres actually producing wetland values.
6. Percent of fish and wildlife habitat that is optimally producing a diversity of fish and wildlife on a sustained basis, as described in the Operational Management Plan (OMP).
7. Percent of forested lands optimally producing forest values as described in the Operations Management Plan (OMP).
8. Percent of grassland acres optimally producing grassland values as described in the Operations Management Plan (OMP), on a sustained basis.
9. Percent of Corps project lands with physically stable soil cover.
10. Percent of fish successfully passed upstream.

11. Percent cultural resources sites and associated information, as defined by relevant cultural resources legislation, protected.
12. Ratio of mitigation lands to non mitigation lands in new Corps projects.

### **Endangered Species Recovery Plans**

There are currently 959 species listed as either endangered or threatened within the United States. Of these species, 79% are listed as endangered and 21% as threatened. There are 320 animal and 434 plant species listed as endangered and 114 animal and 92 plant species listed as threatened.

Section 4(f) of the Endangered Species Act (the Act) calls for the development and implementation of recovery plans for species listed as endangered or threatened unless such plans would not contribute to their conservation. Recovery plans are documents prepared for listed species that detail the specific tasks needed to recover those species. Specific federal, state, and other agencies are mentioned in the recovery plans as having recovery tasks. The purpose of these plans is to “recover” the threatened or endangered species (s). Recovery is the process by which the decline of a threatened or endangered species is reversed, and threats neutralized so that its survival in the wild can be ensured. The goal of the Endangered Species Act is the recovery of listed species to levels where protection under the Act is no longer necessary.

Recovery plans work by identifying a wide range of actions that, when implemented, will help recover the species. These may include reintroduction of the species into formerly occupied habitat, land acquisition and management, or landowner agreements that preserve or enhance habitat, captive breeding, habitat restoration, population assessment, and public education. Not every listed species gets a recovery plan. Because of policy changes in 1994, the FWS is encouraging the development of multi-species recovery plans focusing on ecosystem initiatives. There are currently 519 approved recovery plans and 176 draft recovery plans.

## **North American Waterfowl Management Plan Joint Venture Areas**

On May 14, 1986, the U.S. Secretary of the Interior and the Canadian Minister of the Environment signed the North American Waterfowl Management Plan (NAWMP). The NAWMP was designed in response to significant losses and degradation of wetlands across the continent. The plan was to address the need for protecting, restoring, and managing wetlands of importance to waterfowl and other wildlife. There are thirty-four waterfowl "Habitat Areas of Major Concern" identified by the U.S. and Canada.

One of the provisions of the plan is the formation of partnerships between state and Federal governments, and private organizations to develop and implement conservation and restoration projects in the "Habitat Areas of Major Concern". These partnerships are called "Joint Ventures". The NAWMP has identified thirteen Joint Venture Areas (JVAs), eleven of which occur in the United States (Eastern Habitat and Prairie Habitat Joint Venture Areas occur only in Canada). These JVAs cover 19,178,559 acres within the United States.

In January 1989, the Secretary of the Interior and the Assistant Secretary of the Army (Civil Works) signed a three year Cooperative Agreement (Agreement) supporting the North American Waterfowl Plan. In the Agreement, the Corps and the FWS agreed to develop internal and joint reporting and coordination procedures. In March 1989, Corps field staff responded to a questionnaire which surveyed the number of acres of waterfowl management areas; waterfowl use areas; and areas that have potential for waterfowl habitat management. It was found that the Corps has 1.7 million acres within nine of the designated "Habitat Areas of Major Concern" and has 1.4 million acres within the five "High Priority Areas of Major Concern". One of the purposes of this study is to update these findings using current information. In 1992, the Joint Venture Area boundaries were revised. These revisions were not included in the previous analysis.

## Databases

To determine all of the listed species for which the Corps has recovery responsibilities, they consulted the Fish and Wildlife Service Endangered Species Office in Arlington, Va. The FWS does not yet have a complete set of recovery plans in electronic format so manual entry of their files was necessary. Recovery tasks and responsibilities of the Corps as specified in the recovery plans were also photocopied. In addition, the Final Regulations for all the listed aquatic species were copied to determine any Corps regulatory responsibilities. While this is outside of the scope of the current study, it should be useful for the development of regulatory performance measures.

Based on the above information, several databases using Excel, Version 2.5 were developed. Table 1 summarizes and briefly describes these databases. Endangered species recovery plan information was obtained from Mr. Dave Harrelson at the Fish and Wildlife Service, Endangered Species Office, Arlington, VA. In each recovery plan, the species range targeted for recovery is discussed. This range is included as counties in the endangered species database (current.xls). The Natural Resource Management System of Corps projects was provided by Bill Irwin (CECW-ON). Counties in this NRMS database (nrms.xls) were cross-referenced with counties in the endangered species database (county.xls) to come up with the final database of all species involving the Corps and the associated Corps projects (projend.xls). However, there were several recovery plans which mention the Corps as a responsible agency but do not include Corps projects in the species range targeted for recovery. This may be due to the fact that Corps projects outside of the species recovery range are impacting the status of the species. Dredging, for example, can have deleterious impacts several miles from the actual Corps project site. Species for which there is no known Corps project within the recovery distribution are denoted in the *results* section.

Information on Joint Venture Areas was obtained by Mr. Mark Koneff at the Fish and Wildlife Service, North American Waterfowl Management Office, Arlington, VA. Mr. Koneff

provided a GIS generated map of the Joint Venture Areas and Corps Reservoir Projects as well as raw data. The counties covered in each Joint Venture Area (*jvcounty.xls*) were cross referenced with the counties containing Corps projects. The total number of Corps projects (and associated areas) in each Joint Venture area were then determined (*jvcorps.xls*).

**Table 1. List of created databases.**

DATABASES
<i>Current.xls</i> -master list of all recovery plans and associated species, dates listed, counties, states. Data provided by Dave Harrelson of the FWS.
<i>Nrms.xls</i> -database of all Corps projects including name, county, state and project area.
<i>County.xls</i> -database of endangered species with recovery plans for which the Corps has recovery responsibilities, sorted by county.
<i>Projend.xls</i> -database of Corps projects, county, state, total area, and the endangered species for which they have recovery responsibilities.
<i>Jvcounty.xls</i> -database of all counties included in NAWMP Joint Venture Areas
<i>Jvcorps.xls</i> -database of all Corps projects and associated total area included in NAWMP Joint Venture Areas.

## **CHAPTER 2 - RESULTS**

### **Changes Since Preliminary Report (December 1995)**

In the original analysis dated December 1995, only the number of Corps reservoir projects included in the NAWMP Joint Venture Areas was determined. That analysis has subsequently been expanded to include all Corps Projects included in the Natural Resources Management Systems database; these projects include both Corps reservoirs and lock and dam projects. The original analysis has also been expanded to include Endangered Species Recovery Plans as well as Joint Venture Areas. In addition to the final recovery plans, draft recovery plans are also examined to determine those species for which the Corps has responsibilities.

### **Listed Species With Final Recovery Plans**

In summary, there are 65 species for which the Corps has recovery responsibilities as specified in FWS final recovery plans. Table 2 is a complete list of these species by taxa. Please note that two species, the humpback whale and the right whale, are protected by the National Marine Fisheries Services and were, therefore, not included in this analysis.

Of the 65 species for which the Corps has FWS recovery responsibilities, there is a near equal proportion of fish, plants, aquatic invertebrates, and bird species (Figure 1). Most of these species live in or around water. There are 15 species of mammals and reptiles, collectively, and 2 species of insects for which the Corps has recovery responsibilities. Endangered plants are the most common taxa for which the Corps has recovery responsibilities.

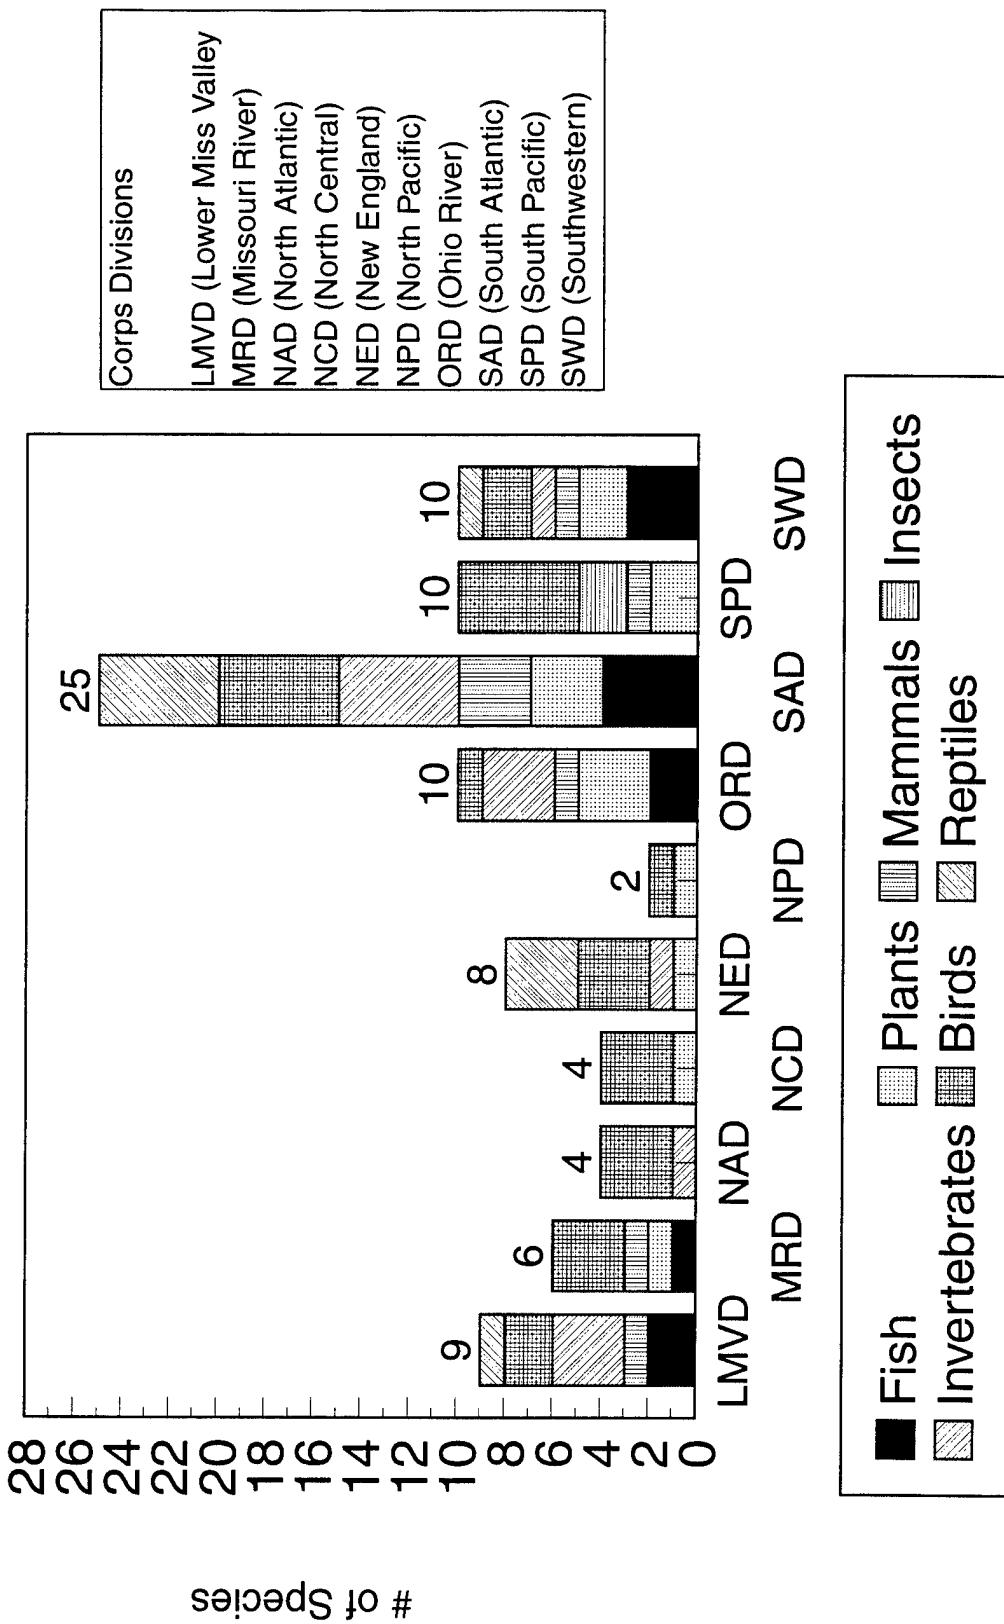

The number of listed species for which the Corps has recovery responsibilities is greatest in the South Atlantic Division (Figure 1). This Division has more than twice the number of species (25 species) than in any other Division. This Division as well as the Southwestern Division have the greatest variety of taxa (6 different taxa). The North Pacific Division has the least number of species; (2 species).

**Table 2. Species for which the Corps has recovery responsibilities listed by taxa.**

<b>Fishes</b>	<b>Birds</b>
Bayou Darter ( <i>Etheostoma rubrum</i> )	Great Lakes Piping Plover ( <i>Charadrius melanotos</i> )
Chihuahua Chub ( <i>Gila nigrescens</i> )	Northern Great Plains Piping Plover
Neosho Madtom ( <i>Noturus placidus</i> )	California Least Tern ( <i>Sterna antillarum browni</i> )
Cahaba Shiner ( <i>Notropis cahabae</i> )	Florida Snail Kite ( <i>Rostrhamus sociabilis plumbeus</i> )
Duskytail Darter ( <i>Etheostoma catonotus</i> )	Whooping Crane ( <i>Grus americana</i> )
Cape Fear Shiner ( <i>Notropis mekistocholas</i> )	Least Bell's Vireo ( <i>Vireo bellii pusillus</i> )
Pallid sturgeon ( <i>Scaphirhynchus albus</i> )	Roseate Tern ( <i>Sterna dougallii dougallii</i> )
Pygmy Madtom ( <i>Notorus stanauli</i> )	Pacific Peregrin Falcon ( <i>Falco peregrinus anatum</i> )
Waccamaw Silverside ( <i>Menidia extensa</i> )	Bald Eagle, Northeastern, Pacific, and Southeastern ( <i>Haliaeetus leucocephalus</i> )
Gulf Sturgeon ( <i>Acipenser oxyrinchus desotoi</i> )	Wood Stork ( <i>Mycteria americana</i> )
Blue Shiner ( <i>Cyprinella caerulea</i> )	California Clapper Rail ( <i>Rallus longirostris obsoletus</i> )
<b>Plants</b>	<b>Mammals</b>
Contra Costa Wallflower ( <i>Erysimum capitatum angustifolium</i> )	Anastasia Island Beach Mouse ( <i>Peromyscus polionotus phasma</i> )
Bradshaw's Lomatium ( <i>Lomatium bradshawii</i> )	Southeastern Beach Mouse ( <i>Peromyscus polionotus niveiventris</i> )
Antioch Dunes Evening-Primrose ( <i>Oenothera deltoides howellii</i> )	Choctawhatchee Beach Mouse ( <i>Peromyscus polionotus allophrys</i> )
Maguire Primrose ( <i>Primula maguirei</i> )	Perdido Key Beach Mouse ( <i>Peromyscus polionotus trissylle</i> )
Texas Dawn-flower ( <i>Hymenoxys texana</i> )	Alabama Beach Mouse ( <i>Peromyscus polionotus ammobates</i> )
Decurrent False Aster ( <i>Boltonia decurrens</i> )	Salt Marsh Harvest Mouse ( <i>Reithrodontomys raviventris</i> )
Jesup's milk-vetch ( <i>Astragalus robbinsii jesupi</i> )	Gray Bat ( <i>Myotis grisescens</i> )
Northeastern Bulrush ( <i>Scirpus ancistrochaetus</i> )	<b>Aquatic Invertebrates</b>
Price's Potato Bean ( <i>Apios priceana</i> )	Tar Spiny Mussel ( <i>Elliptio steinstansana</i> )
<i>Geocarpus minimum</i>	Inflated Heelsplitter ( <i>Potamilus inflatus</i> )
Virginia Spiraea ( <i>Spiraea virginiana</i> )	Curtis' Pearly Mussel ( <i>Epioblasma florentina curtisi</i> )
White haired goldenrod ( <i>Solidago albopilosus</i> )	Royal Snail ( <i>Pyrgulopsis ogmorhaphe</i> )
Smooth Coneflower ( <i>Echinacea laevigata</i> )	Purple Cat's Paw Pearly Mussel ( <i>Epioblasma obliquata obliquata</i> )
Florida Torreya ( <i>Torreya taxifolia</i> )	Dwarf Wedge Mussel ( <i>Alasmidonta heterodon</i> )
Key Tree Cactus ( <i>Pilocereus robinii</i> )	Speckled Pocketbook Mussel ( <i>Lampsilis streckeri</i> )
<b>Reptiles</b>	Curtis' Pearly Mussel ( <i>Pleurobema curtum</i> )
Yellow-Blotted Map Turtle ( <i>Graptemys flavimaculata</i> )	Marshall's Pearly Mussel ( <i>Pleurobema marshalli</i> )
Ringed Sawback Turtle ( <i>Graptemys oculifera</i> )	Arkansas Fatmucket Mussel ( <i>Lampsilis powelli</i> )
Leatherback Sea Turtle ( <i>Dermochelys coriacea</i> )	James River Spiny Mussel ( <i>Pleurobema collina</i> )
Hawksbill Sea Turtle ( <i>Eretmochelys imbricata</i> )	Speckled Pocketbook Mussel ( <i>Lampsilis streckeri</i> )
Green Sea Turtle ( <i>Chelonia mydas</i> )	Kentucky Cave Shrimp ( <i>Palaemonias ganteri</i> )
Loggerhead Turtle ( <i>Caretta caretta</i> )	<b>Insects</b>
Concho Water Snake ( <i>Nerodia paucimaculata</i> )	Lange's Metalmark Butterfly ( <i>Apodemia mormo langei</i> )
San Francisco Garter Snake ( <i>Thamnophis sirtalis tetrataenia</i> )	Valley Eldeberry Longhorn Beetle ( <i>Desmocerus californicus dimorphicus</i> )

## Figure 1

### # of Listed Species For Which the Corps Is Responsible In Each Corps Division

Note that, in Figure 1, individual species overlap different Divisions and are counted more than once. For example, the bald eagle has a large range which includes many different Corps Divisions. Therefore, the combined total of all species for which the Corps has recovery responsibilities in each Division is greater than the 65 species.

#### **Listed Species with Draft Recovery Plans**

The Corps also has recovery responsibilities for 11 listed species as specified in draft recovery plans. These are plans that have not yet been finalized by the Fish and Wildlife Service but will be soon. Table 3 lists these species and their population ranges. The Corps is explicitly identified as an active participant in the recovery of these 11 species. Please note that there is a draft recovery plan for 13 invertebrate species in the Mobile River Basin but FWS was unable to provide the Corps of a copy of this plan. These species include the fine-lined pocketbook, goldline darter, Alabama moccasinshell, ovate clubshell, southern clubshell, southern acornshell, upland combshell, triangular kidneyshell, Coosa moccasinshell, and southern pigtoe. It is likely that the Corps is involved in the recovery of these species because there are several Corps projects in this area. Another likely endangered species for which the Corps has some responsibility is the delta smelt. This species has a draft recovery plan but there was no copy of this report in the FWS file room.

**Table 3. Species with draft recovery plans for which the Corps has a recovery responsibility.**

<b>Species</b>	<b>Current Population Distribution</b>
Relict Darter	Bayou du Chien system in western Kentucky
Louisiana Black Bear	Tensas River Basin in Franklin, Madison, and Tensas Parishes in northeastern Louisiana Atchafaya River Basin in Iberia and St. Mary Parish in south-central Louisiana
Amargosa Vole	Tecopa Lake and Amargosa, Nevada
Carolina Heelsteller	Catawba River System, Goose Creek, Flat Creek, and Lynches River in Union County North Carolina
Idaho Springsnail	Mainstream Snake River, Idaho
Utah Valvata Snail	Mainstream Snake River in southern Idaho
Snake River Physa Snail	Mainstream Snake River in southern Idaho
Bliss Rapids Snail	Mainstream Snake River, Idaho
Banbury Springs Lanz	Banbury Springs, Thousand Springs, and Box Canyon Spring, Idaho
Sensitive Joint Vetch	Somerset County, Maryland Cumberland County, New Jersey Salem County, New Jersey Hyde County, North Carolina Beaufort, County, North Carolina New Kent, Virginia Charles City, Virginia King William, Virginia Stafford, Virginia Richmond, Virginia

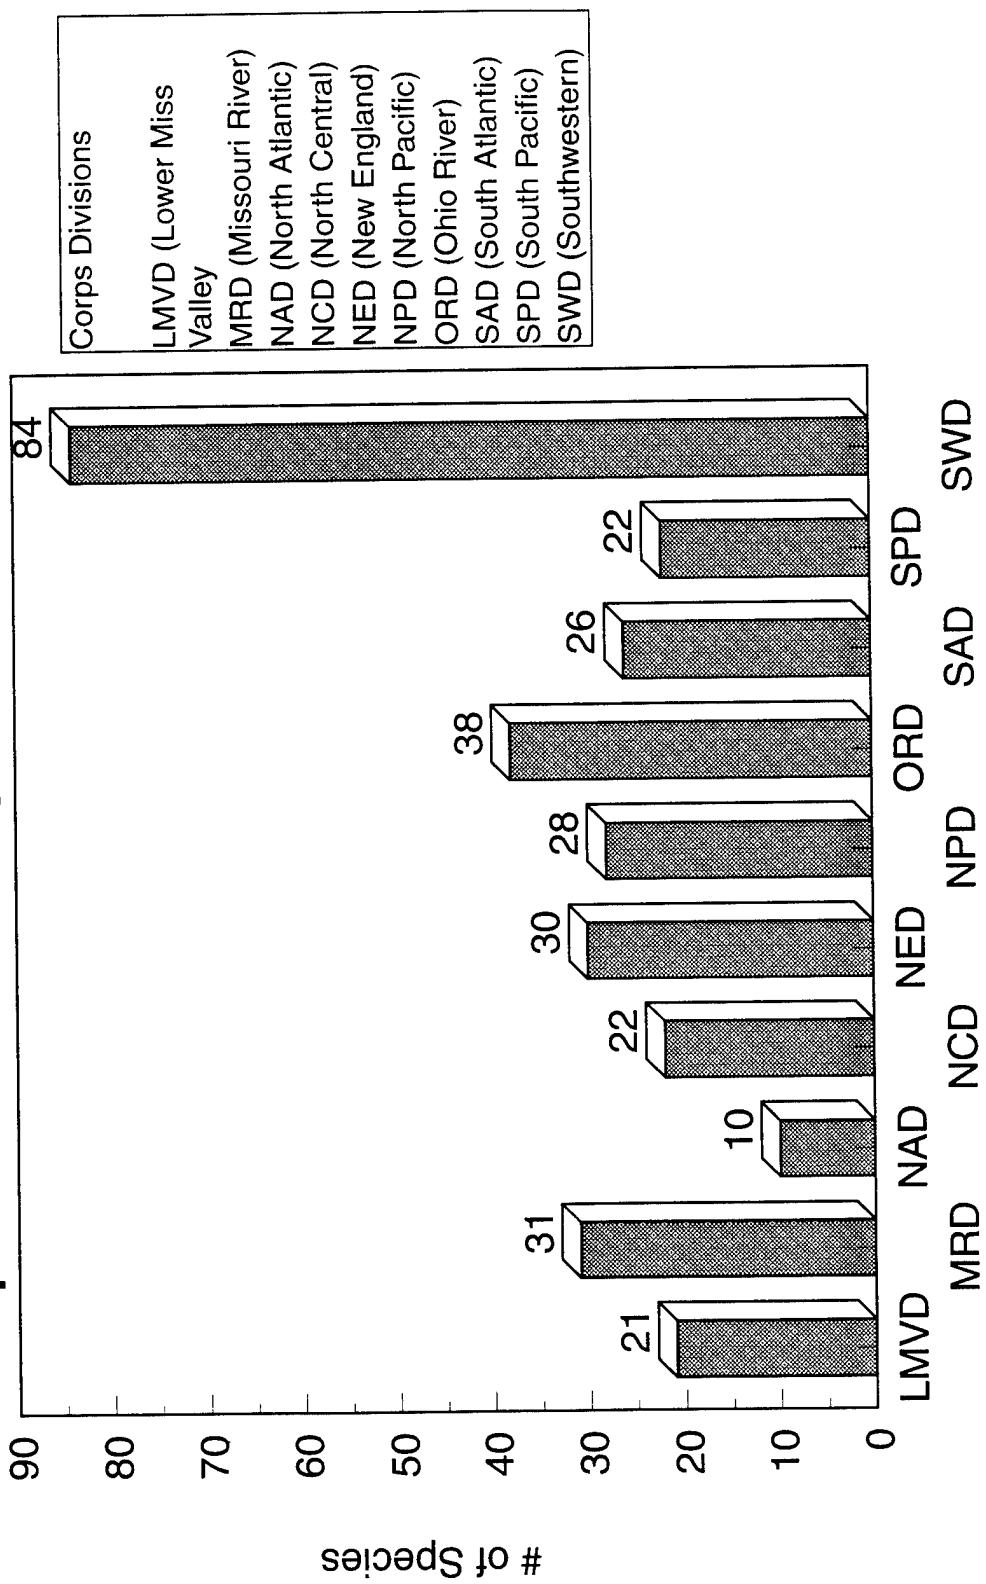

### **Corps Projects with Endangered Species**

There are a total of 312 Corps projects that possibly have endangered species with final recovery plans. The Southwestern Division has the greatest number of projects with endangered species (Figure 2). Over a fourth of the total projects with endangered species are in this Division (84 projects, 27% of total). The North Atlantic Division has the fewest number of projects (10 projects; 3.2% of total) with endangered species. The remaining districts have from 6.7% (21 projects, SPD) to 12.5% (39 projects, ORD) of the total projects with specified recovery activities.

The Corps has 7,479,571 acres (total area including land and water) included in the Fish and Wildlife Service endangered species recovery plans. This is two-thirds of the 11.9 million acres owned or leased by the Corps. As shown in Table 4, the Omaha District has the largest acreage included in FWS endangered species recovery plans (1,672,731 acres; 22% of total owned or leased by Corps). The Little Rock District has the second largest acreage included in these recovery plans (748,210 acres; 10% of total owned or leased by Corps). All other districts have less than 10% of the total acreage owned or leased by the Corps.

It is important to note that the estimated acreage of Corps lands included in FWS recovery plans may be conservative. There were several recovery plans which name the Corps as an active participant but whose area identified for recovery activities does not include a Corps project. This is most likely due to far-reaching impacts of some Corps activities which extend well beyond the actual project area. There are 14 such species (Table 5).

**Figure 2**  
**# of Corps Projects with Endangered Species In Each Corps Division**

**Table 4. Corps Acres in Fish and Wildlife Service Recovery Plans.**

Corps District	Total Corps Acres	% of Total Corps Acres
St. Louis	252,574	3.38
Vicksburg	666,190	8.91

Pygmy Madtom	TN	Hancock, Hickman
Royal Snail	TN	Marion
Speckled Pocketbook Mussel	AR	Stone, Van Buren
Tar Spinymussel	NC	Swift, Edgecomb, Franklin
Waccamaw Silverside	NC	Columbus
Yellow-Blotched Map Turtle	MS	Covington, Clarke

### **Recovery Plan Specifications**

For each recovery plan, detailed actions are specified for all participating agencies. Appendix A summarizes the actions for which the Corps is responsible as discussed in the FWS recovery plans. As mentioned earlier, there are several species for which there are no known associated Corps projects. In Appendix A, these are noted with a question mark. Recovery distributions for the bald eagle and the whooping crane span several states and involve many Corps projects (92 for the bald eagle and 34 for the whooping crane). In contrast, species such as the Decurrent False Aster occur in only one county and involves only one Corps project. Recovery responsibilities range from the highly involved (e.g., monitoring populations, developing

management strategies; modifying habitat) to ones that are limited in scope (e.g., ensuring that 404 permits do not adversely harm species).

### **NAWMP Joint Venture Areas and Corps Projects**

There are thirteen North American Waterfowl Joint Venture Areas (JVAs) identified in the United States and Canada (Figure 3). The Corps has Civil Works Projects in eight of these JVAs: Atlantic Coast, Central Valley, Intermountain West, Lower Mississippi Valley, Pacific Coast, Playa Lakes, U.S. Prairie Potholes, and the Upper Mississippi.

Based on current (1996) Joint Venture Area boundaries, the Corps has 1,697,047 acres (land and water) within eight NAWMP JVAs. This acreage represents 15.4% of the total land owned or leased by the Corps (11.9 million) and 8.8% of the land included in JVAs within the United States (19,178,559 acres). As shown in Figure 4, the Lower Mississippi Valley Joint Venture Area includes nearly 40% of the total acreage of Corps lands included in JVAs (650,095 acres). The Joint Implementation Plan for the Lower Mississippi Valley calls for active participation by the Corps. Specifically, this JVA mentions the following actions to be pursued:

- Develop and implement plans for the conservation, development, and management of waterfowl and wetlands on lands associated with the Corps Civil Works Projects in accordance with a January 1989 Cooperative Agreement between the Department of the Interior and the Army;
- In cooperation with State and Federal wildlife agencies and Ducks Unlimited, use engineering design and construction capabilities of the USACE to construct water control features to restore, develop, and manage wetland hydrology on the national Wildlife Refuge System and State Wildlife Management areas;
- Coordinate waterfowl management activities between related public areas and coordinate public management with that occurring on adjacent private lands.

# North American Waterfowl Management Plan Habitat Joint Venture Areas

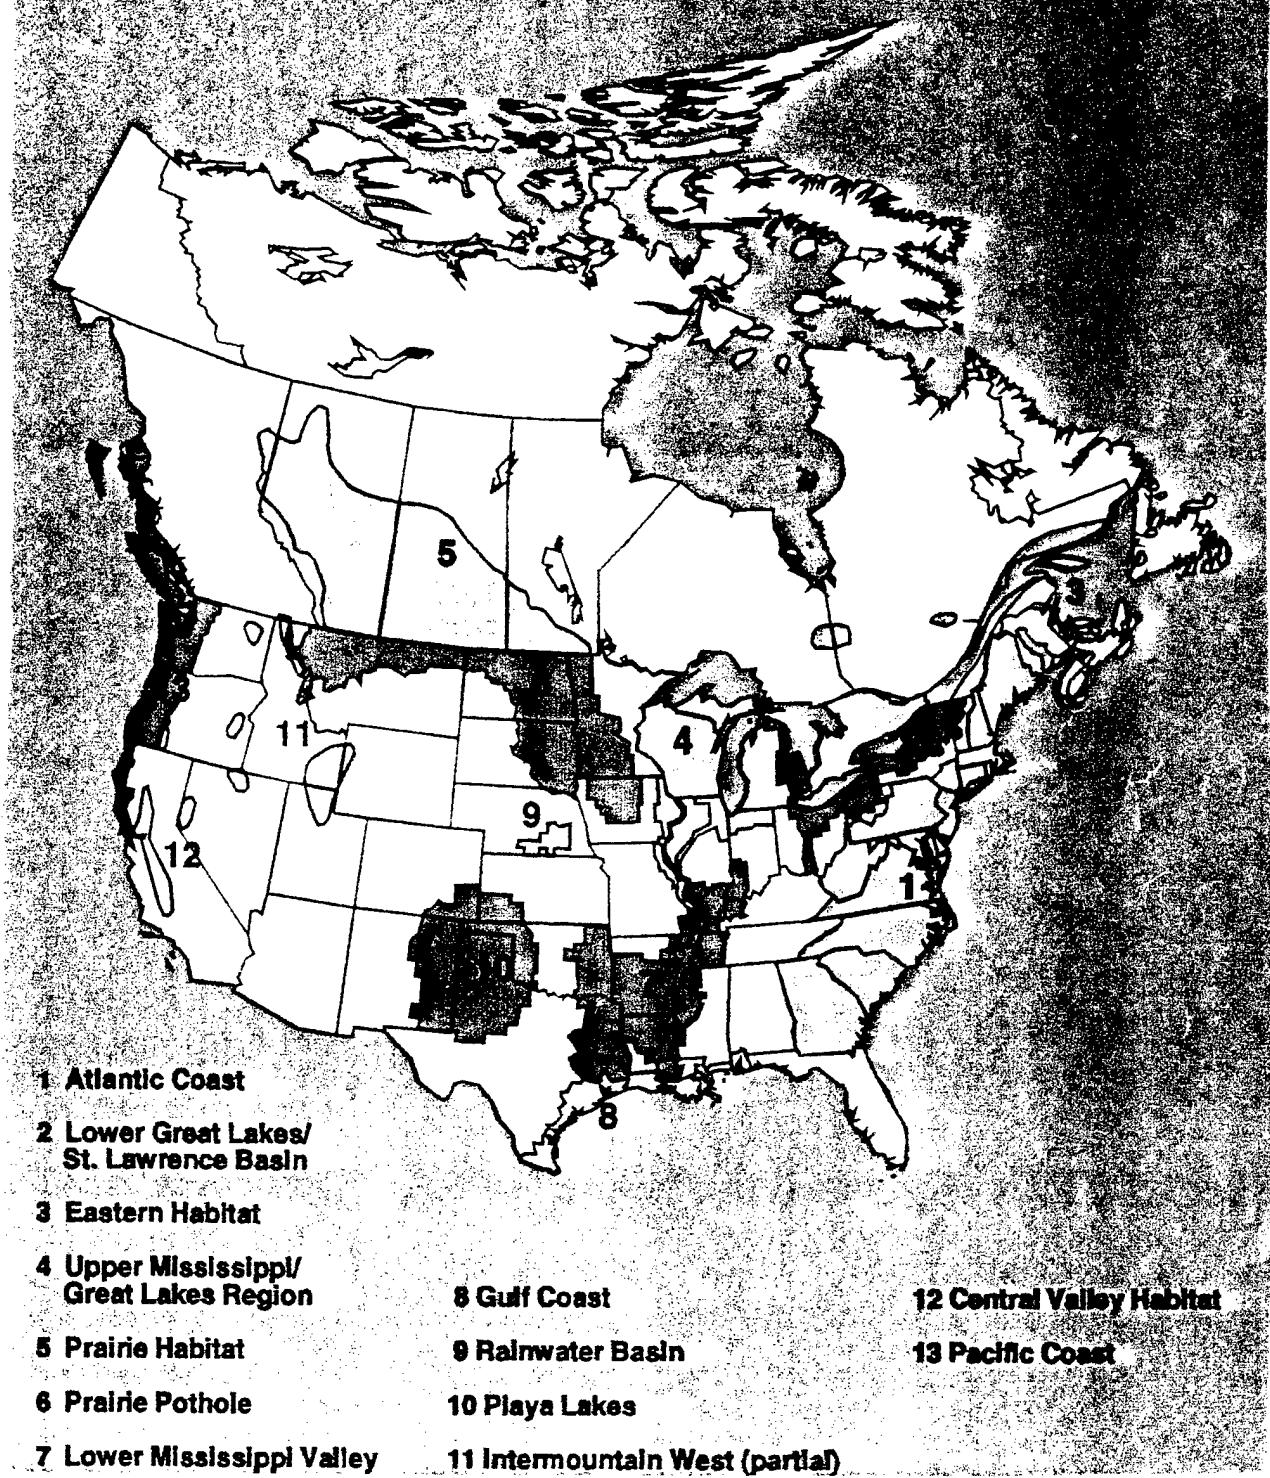

Figure 3. North American Waterfowl Management Plan Habitat Joint Venture Areas, 1996.

The LMV Joint Venture proposes that Congress give the Corps a specific environmental mission in the LMV—that of a “wetland engineer”. The primary focus of this mission would be for the Corps to work with State wildlife agencies, the FWS and Ducks Unlimited in restoring and enhancing wetlands and waterfowl habitat on public lands.

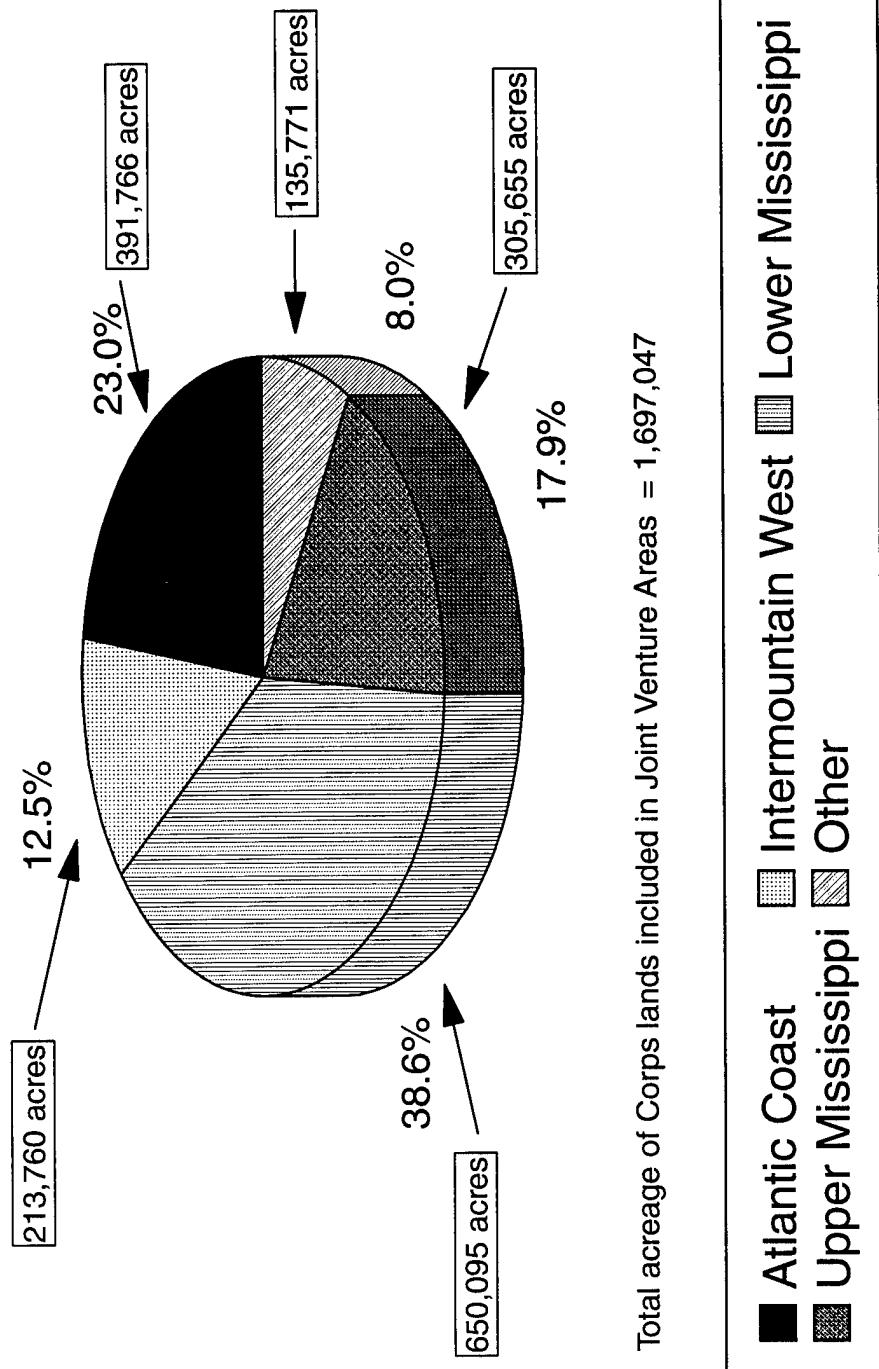

The Corps also has significant holdings in the Intermountain West, Upper Mississippi, and Atlantic Coast JVAs; combined totaling over 900,000 acres (Figure 4). There are four joint venture areas, the Central Valley, Pacific Coast, Playa Lakes, and U.S. Prairie Potholes which each have less than 2% of the total Corps acreage included in joint venture areas. Combined, these four JVAs account for only 8% of the total acreage of Corps lands included in JVAs (1,697,047).

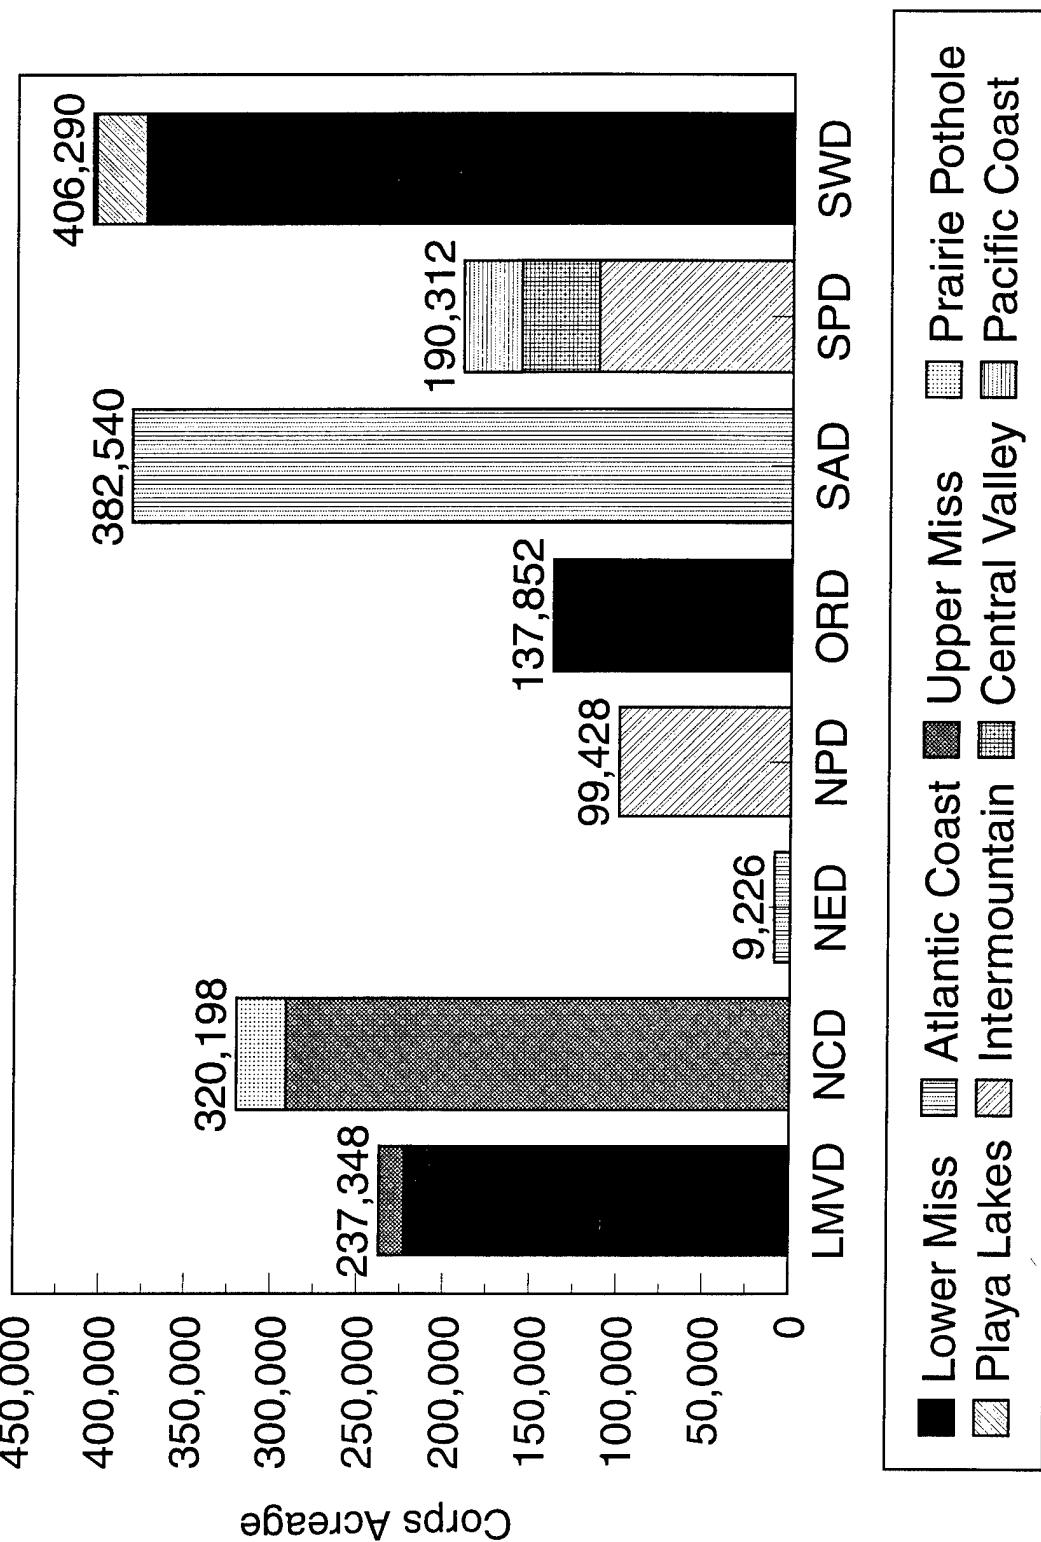

As shown in Figure 5, the Southwestern Division contains the greatest amount of Corps lands included in JVAs (406,290 acres). This Division encompasses three different JVAs: the Intermountain West, the Playa Lakes, and the Lower Mississippi Valley covering over 400,000 acres. The SAD and the NCD each have over 300,000 acres included in JVAs. Combined, these three Divisions contain nearly two-thirds (65%) of all Corps lands which occur in JVAs. In total, the Corps has 66 projects which are involved in JVAs. See Appendix B for a complete list of all Corps projects.

There are approximately 19,178,000 acres included in existing Joint Venture Areas for the continental United States. In summary, the Corps manages 8.8% of all lands or 1,679,047 acres located within the eight existing Joint Venture Areas. Table 4 compares the amount of lands located within each Joint Venture and identifies percentages under Corps management.

**Figure 4.**

**Corps Projects Within NAWMP Joint Venture Areas**

**Figure 5.****Corps Division Project Acres in NAWMP Joint Venture Areas**

## **CHAPTER 3 - CONCLUSIONS**

In conclusion, the Corps has an important role to play as an environmental steward of public lands. With nearly 12 million acres of public lands owned or leased by the Corps, over two-thirds of these lands impacted by endangered species recovery plans and 15% involved in Joint Venture Areas, the Corps has an enormous responsibility. The formation of performance measures is to ensure that these responsibilities are being met. While this report provides the initial information needed to develop accurate performance measures, more information from Corps projects is needed to fulfill the latter portions of the performance measures. For example,:

1. Percentage of Corps acreage included in Fish and Wildlife Service (FWS) Endangered Species Recovery Plans *that meet the recovery plan requirements*; and
2. Percentage of Corps acreage included within North American Waterfowl Management Plan (NAWMP) Joint Venture Implementation Plans *where proposed work has been accomplished.*

It is recommended that managers of projects which are specified in Appendix A be contacted to determine their project's involvement in endangered species recovery plans, with special attention given to the South Atlantic Division and the Omaha District. Similarly, managers of projects listed in Appendix B should be consulted to determine their involvement in the JVAs. For a summary of all Corps projects possibly involved in endangered species recovery plans and/or NAWMP Joint Venture Areas see Appendix C.

## **APPENDIX A**

### **RECOVERY ACTIONS FOR THE CORPS AS SPECIFIED IN FWS RECOVERY PLANS**

Species/Recovery Plan	Corps Action(s)	State and Counties Within Recovery Distribution	Corps Project(s)
PLANTS			
Antioch Dunes	Rebuild natural dune topography with dredge spoil sand	CA Contra Costa	San Francisco Bay
Maguire Primrose	Manage water development activities	UT Cache	?
Texas Prairie Flower	Establish protected sites on public lands. Implement a long range management plan. Enforce laws and regulations. Monitor populations. Develop public awareness.	TX Harris	Addicks Dam Barker Dam
Decurrent False Aster	Management for Columbia Bottoms population. Management plan for Spatterdock Bottom populations.	IL Tazewell	Farmdale Dam
Jesup's Milk-Vetch	Ensure continuation of river dynamics.	VT Windsor	North Hartland Lake North Springfield Lake
Northeastern Bulrush	Ensure that permits issued do not adversely affect extant populations.	PA Monroe VT Windham	Beltzville Lake Francis E. Walter Dam Ball Mountain Lake Townshend Lake Alvin R. Bush-Kettle Creek Raystown Lake Gathright Dam-Lake Moomaw
Price's Potato Bean	Develop management plans.	KY Livingston KY Lyon TN DeKalb	Barkley Lock and Dam Center Hill Lake
Geocarpon minimum	Protect populations.	AR Franklin MO Cedar	Ozark Lake Stockton Lake

Species/Recovery Plan	Corps Action(s)	State and Counties Within Recovery Distribution	Corps Project(s)
PLANTS			
Virginia Spriaea	<p>Identify and monitor threats to each existing population.</p> <p>Conduct range-wide searches for additional populations.</p> <p>Conduct site-specific manipulation to maintain existing populations.</p> <p>Monitor clonal size and distribution in a disturbed and in a natural system.</p> <p>Conduct long-term demographic studies.</p>	<p>KY VA VA WV</p> <p>Laurel Dickenson Wise Nicholas</p>	<p>Laurel River Lake John W. Flannagan Dam North Fork of Pound River Lake Summersville Lake</p>
White-Haired Goldenrod	Ensure species' protection if Red River is dammed.	KY Menifee	Cave Run Lake
Smooth Coneflower	<p>Implement protective management for extant populations.</p> <p>Enforce laws protecting the species and its habitat.</p> <p>Monitor existing populations.</p> <p>Prepare and distribute news releases and informational brochures.</p> <p>Annually assess success of recovery efforts for the species.</p>	VA Franklin	Philpott Lake
Florida Torreya	<p>Manage existing biological preserves.</p> <p>Protect habitat from activities within preserves.</p> <p>Protect habitat from activities outside preserves.</p>	FL FL	<p>Gadsden Jackson</p> <p>Lake Seminole</p>
Key Tree Cactus	<p>Prevent surface mining.</p> <p>Control habitat alteration.</p> <p>Prevent lowering of water table.</p> <p>Prevent subsurface salt water intrusion.</p>	FL Monroe	?

13. ABSTRACT (Maximum 200 words) In Accordance with the Government Performance and Review Act and its on-going implementation in the Corps of Engineers Operations and Maintenance Program, the Natural Resources Branch of this same agency has instituted a plan of action to develop performance standards in the management of lands and water areas around Corps water resources development projects. As part of a data base utilized to provide quantitative information on performance measures, this report contains information on the percentage of Corps reservoir acreage included in Fish and Wildlife Service Endangered Species Recovery Plans meeting plan requirements and amount of similar Corps acreage included in North American Waterfowl Management Joint Venture Implementation Plans.
